RayNet (F) to RJ45 (M) adaptor cable Features

Cable System

Raymarine’s current generation system that replaces the RJ45 connector with a waterproof vibration tolerant twist pin connector that is designed for the marine environment.

The Raynet to RJ45 Ethernet (M) adapter can be used to connect new a, c and e-Series MFDs to the SR6 or 8-Port Seatalk High Speed network switch.

When used in conjunction with a crossover coupler, this adapter can also convert the Ethernet connection on a radar scanner, DSM or thermal camera for direct-connection to an HS5 network switch, or MFD RayNet port.

Available in 1, 3 or 10-metre lengths.
